

Chronic Disease Management

Data-Driven Solutions for Payers

Healthcare expenditures are on the rise, in part, due to aging populations and patients with chronic diseases, which make up 40% of the total U.S. population and accounts for 75% of healthcare spending.

We help organizations work smarter, not harder, to reduce costs by leveraging predictive analytics and dashboards to prevent unnecessary admissions, deploy preventative care programs, and better engage with your members outside traditional care settings.

Benefits At-A-Glance

Reduce hospital admissions for the overall population:

30% of ED visits among patients with chronic conditions are potentially unnecessary, amounting to \$8.3B in additional costs. We deploy targeted outreach to high ED utilizers.

Rapid realization and unlocking of new cost savings:

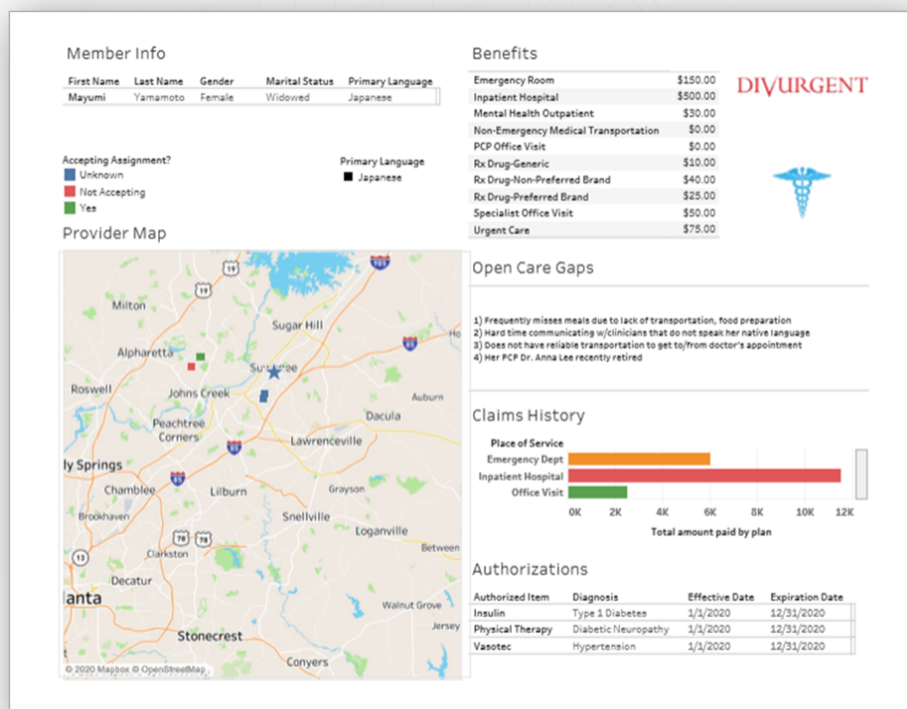

A one point reduction in a diabetic's HbA1c results in annual cost savings of \$4,100. Our program enables you to engage with members to accomplish this.

Increase the preventative steps in care:

\$129,000 is the difference in cost of treatment of early stage breast cancer vs late stage breast cancer. We partner with you to deploy tailored outreach related to preventative care.

Dashboard Example

About Divurgent

Divurgent is a solutions provider focused on what matters most to our client partners. We disrupt the typical value equation by using data-infused, flexible, and scalable solutions that demonstrate and quantify value for our partners.

Our **differentiated capabilities** include: Domain Industry Leaders and Best Practices; Deep Knowledge of State and Federal Regulations; Subject-Matter-Expertise Across Clinical and Value-Based Care Models; Fast-Track Identification of Untapped Savings Opportunities
